CHAPTER I
INRODUCTION ......................................................................................................... 1
  1.1. Background and Problem Statement......................................................... 1
  1.2. Objectives of the research ........................................................................ 3
  1.3. Scope of the Study ..................................................................................... 3

CHAPTER II
LITERATURE REVIEW .......................................................................................... 4
  2.1. Introduction ................................................................................................... 4
  2.2. Subgrade ..................................................................................................... 4
      2.2.1. Monmorillonite mineral ....................................................................... 7
  2.3. Cause of roadway failures .......................................................................... 10
  2.4. Soil stabilization .......................................................................................... 13
      2.4.1. Stabilization materials ....................................................................... 15
      2.4.2. Lime stabilization ............................................................................. 16
  2.5. Buton Natural Rock Asphalt (BNRA) ....................................................... 19
  2.6. CBR method for soil stabilization ............................................................... 23
  2.7. Pavement Design Method .......................................................................... 24
      2.7.1. Flexible Pavement ............................................................................ 25
## TABLE OF CONTENTS

2.7.2. Rigid Pavement ......................................................... 28
2.8. Summary of the literature review .................................... 31

### CHAPTER III
**RESEARCH DESIGN AND METHODOLOGY** .............................. 33

3.1. Introduction ...................................................................... 33
3.2. Investigation of Existing Subgrade Soil ............................... 33
3.3. Design of pavement structure ............................................ 34
    3.2.1. Pavement type .......................................................... 34
    3.2.2. AASHTO 1993 Design Methods .................................. 35
    3.2.3. Design of Flexible Pavement .................................... 39
    3.2.4. Design of Rigid Pavement ....................................... 44

### CHAPTER IV
**PAVEMENT DESIGN AND CALCULATION** ................................. 50

4.1. Introduction ...................................................................... 50
4.2. Time Constraints ............................................................ 50
4.3. Performance Period ........................................................ 50
4.4. Analysis Period .............................................................. 51
4.5. Traffic ............................................................................ 52
4.6. Calculation of Equivalent Single Axle Load (ESAL) ............. 53
4.7. Reliability ........................................................................ 57
4.8. Serviceability ................................................................. 59
4.9. Effective Roadbed Soil Resilient Modulus ......................... 60
4.10. Pavement Layer Materials Characterization ...................... 60
4.11. Layer Coefficient .......................................................... 61
4.12. Drainage Coefficient ...................................................... 64
4.13. Determination of Structural Layer Thickness ..................... 66
    4.13.1. Flexible Pavement .................................................. 66
    4.13.2. Rigid Pavement ...................................................... 75
CHAPTER V

CONCLUSIONS AND RECOMMENDATIONS ............. 82
5.1. Conclusions............................................................. 82
5.2. Recommendations..................................................... 82
