

LIST OF FIGURES

Figure 1.1a.	Flexible Pavement Structure	2
Figure 1.1b.	Rigid Pavement Structure	2
Figure 1.2a.	Flexible Pavement Surface	3
Figure 1.2b.	Rigid Pavement Surface	3
Figure 2.1.	Diagram Illustrating Soil Deformation Under Whell Load	14
Figure 2.2a.	Result of Plastic Deformation in Surface Course and Base	15
Figure 2.2b.	Result of Plastic Deformation in Basement Soil	15
Figure 3.1.	Flowchart of Research Design and Methodology	25
Figure 3.2.	Example Plot Of Cumulative 8.16 Ton ESAL Traffic	30
Figure 3.3.	Thicknesses Of Layers Using A Layered Analysis Approach	35
Figure 3.4.	Design Chart SN for Fexible Pavement.....	37
Figure 3.5.	Composite Modulus of Subgrade Reaction (K)	38
Figure 3.6.	Modulus of Subgrade Reaction (k)	39
Figure 3.7.	Design Chart for Rigid Pavement (Segmen 1)	42
Figure 3.8.	Design Chart for Rigid Pavement (Segmen 2)	43
Figure 3.9a.	Influence of Multiple Wheels on Stresses	44
Figure 3.9b.	Method of Determining Equivalent Single Wheel for any Dual-wheel Load	44
Figure 3.10.	Curve Determines the Value of the Reduction Factor for Dual Wheel Aircraft	46
Figure 3.11.	A Curve that Determinants of Rigid Pavement Thick Airbus A320 Plane the PCA Method	50
Figure 3.12.	Airbus A320 General aircraft dimension.....	53
Figure 3.13.	Airbus A320 Landing gear footprint	53
Figure 4.1.	Plot of cumulative 8.16 ton – ESAL traffic vs time	62
Figure 4.2.	Chart to determine coefficient of surface layer a ₁	65

Figure 4.3.	Chart above Foundation layer coefficient a_2	66
Figure 4.4.	Chart above Foundation layer coefficient a_3	67
Figure 4.5.	Procedure for determining thickness of layers using a layered analysis approach.....	69
Figure 4.6.	Design Chart SN_3 for Flexible Pavement	71
Figure 4.7.	Design Chart SN_1 for Flexible Pavement	72
Figure 4.8.	Design Chart SN_2 for Flexible Pavement	73
Figure 4.9.	Design result of Rigid CBR < 2.....	75
Figure 4.10.	Design result of Rigid CBR 2 – 3.....	75
Figure 4.11.	Design result of Rigid CBR > 3.....	75
Figure 4.12.	Chart for estimating composite modulus of subgrade reaction K_s , assuming a semi – infinite subgrade depth for CBR < 2	79
Figure 4.13.	Chart to Modify Modulus of Subgrade Reaction to Consider Effects of Rigid Foundation Near Surface CBR < 2	80
Figure 4.14.	Design Chart for Rigid Pavement (Segmen 1)	81
Figure 4.15.	Design Chart for Rigid Pavement (Segmen 2)	82
Figure 4.16.	Design result of Rigid CBR < 2.....	83
Figure 4.17.	Design result of Rigid CBR 2 – 3.....	83
Figure 4.18.	Design result of Rigid CBR < 3.....	83
Figure 4.19.	Kurve Equivalent Single Wheel Load	87
Figure 4.20.	Design result Airfield Pavement CBR < 2	92
Figure 4.21.	Design result Airfield Pavement CBR 2 – 3	93
Figure 4.22.	Design result Airfield Pavement CBR > 3	93
Figure 4.23.	Conversion CBR to K Value (Rigid Pavements)	95
Figure 4.24.	Graph aircraft specification on Ahmad Yani International Airport	97
Figure 4.25.	Design result Airfield Pavement PCA CBR < 2.....	98
Figure 4.26.	Design result Airfield Pavement PCA CBR 2 – 3	98
Figure 4.27.	Design result Airfield Pavement PCA CBR > 3	98

LIST OF TABLES

Table 1.1.	Length and Condition of Road in Indonesia	2
Table 3.1.	Suggested Levels of Reliability	31
Table 3.2.	Serviceability index	32
Table 3.3.	The Quality of Drainage Based on Humidity Levels	33
Table 3.4.	Safety Factor PCA Method.....	48
Table 3.5.	Data of Annual Departure in Ahmad Yani International Airport.....	51
Table 3.6.	Technical Specifications of Airbus A320.....	52
Table 4.1.	Data of Soil from Semarang – Purwodadi road	54
Table 4.2.	Dimension of CAF	55
Table 4.3.	Factors of Bearing Capacity for Foundation	56
Table 4.4.	Result of Terzaghi’s Theory	56
Table 4.5.	M_R value resulting form equation 4.7.	57
Table 4.6.	Average Daily Traffic year 2016	58
Table 4.7.	Number of Equivalency (E) of axle load	59
Table 4.8.	Load Configuration for 8,16 Ton ESAL	59
Table 4.9.	Worksheet for Calculating 8,16 ton (ESAL) Applications	60
Table 4.10.	Result of Flexible Pavement Thicknesses	74
