ABSTRAK

Penelitian ini bertujuan untuk mengetahui hubungan antara dukungan sosial teman dengan *problem focused coping* di Universitas Islam Sultan Agung Semarang. Penelitian ini menggunakan metode kuantitatif yang dilakukan pada 106 mahasiswa Kedokteran dengan metode pengambilan sampel menggunakan *cluster random sampling*. Penelitian ini menggunakan dua skala yaitu skala dukungan sosial teman dan skala *problem focused coping*. Skala dukungan sosial teman berjumlah 38 aitem dengan rentang daya beda 0,330 - 0,681 dengan koefisien reliabilitas sebesar 0,934. Skala *problem focused coping* berjumlah 18 aitem dengan rentang daya beda 0,281-0,504 dengan koefisien reliabilitas 0,791. Teknik analisis data yang digunakan yaitu *product moment* dibantu program SPSS versi 16. Hasil analisis hipotesis yang dilakukan diperoleh nilai korelasi r_{xy} 0,519 dengan taraf signifikansi $p < 0,000$ ($p < 0,01$). Hasil tersebut menunjukkan adanya hubungan positif yang signifikan antara variabel dukungan sosial teman dengan *problem focused coping*.

Kata kunci : dukungan sosial teman, *problem focused coping*

**CORRELATION BETWEEN FRIENDS SOCIAL SUPPORT WITH PROBLEM
FOCUSED COPING IN MEDICAL STUDENTS OF SULTAN AGUNG
ISLAMIC UNIVERSITY SEMARANG**
