**HUBUNGAN KARAKTERISTIK PERAWAT DENGAN PELAKSANAAN
KESELAMATAN PASIEN (*SAFETY*) DI RSI SULTAN AGUNG
SEMARANG**

56 halaman + 10 tabel + 2 gambar + 15 lampiran + xvi

Latar Belakang : Keselamatan pasien adalah sistem pelayanan di rumah sakit yang diberikan kepada pasien untuk memberikan rasa aman dan memberikan penanganan kepada pasien lebih baik. Pelaksanaan keselamatan pasien dipengaruhi oleh karakteristik perawat yang meliputi usia, jenis kelamin, tingkat pendidikan dan masa kerja. Penelitian ini bertujuan untuk mengetahui hubungan karakteristik perawat dengan pelaksanaan keselamatan pasien (*safety*) di RSI Sultan Agung Semarang.

Metode : Penelitian ini merupakan penelitian kuantitatif dengan metode observasional melalui pendekatan *cross sectional*. Pengambilan data dengan observasi secara langsung. Jumlah responden sebanyak 95 responden dengan menggunakan *simple random sampling*. Data yang diperoleh diolah secara statistik dengan menggunakan uji Spearman.

Hasil : Berdasarkan hasil analisis data didapatkan bahwa dari 95 responden sebagian besar berusia 26-35 tahun sebesar 60 responden (63,2%), jenis kelamin perempuan sebanyak 68 responden (71,6%), berpendidikan DIII Keperawatan sebanyak 65 responden (68,4%) dan masa kerja paling banyak 1-5 tahun sebesar 44 responden (46,3%). Pelaksanaan keselamatan pasien (*safety*) dalam kategori baik sebesar 50 responden (52,6%). Hasil uji Spearman diperoleh nilai $p > 0,05$.

Simpulan : tidak ada hubungan karakteristik perawat dengan pelaksanaan keselamatan pasien (*safety*) di RSI Sultan Agung Semarang.

Kata kunci : karakteristik perawat, safety

The Relationship between nurse characteristics with the implementation of patient safety in RSI Sultan Agung Semarang

56 pages + 10 tables + 2 figures + 15 appendices + xvi

Background: Patient safety is a system of hospital services provided to patients to provide a sense of security and better treatment to patients. The implementation of patient safety is influenced by nurse characteristics which include age, gender, education level and length of service. This study aims to determine the relationship between nurse characteristics with the implementation of patient safety in RSI Sultan Agung Semarang.

Method: This research is a quantitative research with observasional method through a cross sectional approach. Data collection was done by direct observation. The number of respondents in this research are 95 respondents with sampling technique using simple random sampling. The data obtained were processed statistically by used Spearman test.

Result: based on result of data analysis found that from 95 responden mostly aged 26-35 year equal to 60 respondents (63,2%), female gender were 68 respondents (71,6%), education level is DIII nurse were 65 respondents (68,4%) and working period was at most 1-5 years were 44 respondents (46,3%). The implementation of patient safety in a good category of 50 respondents (52,6%). Spearman test results obtained p value > 0,05.

Conclusion: there is no relationship between nurse characteristics with the implementation of patient safety in RSI Sultan Agung Semarang.

Keywords: nurse characteristics, patient safety
