LIST OF ABBREVIATIONS		xxx
LIST OF APPENDICES		xxxvii
CHAPTER I INRODUCTION		1
1.1. Background.....		1
1.2. Objective of the Study		5
1.3. Problem Limitation.....		5
1.4. Scope of the Study		6
CHAPTER II LITERATURE REVIEW		7
2.1. Introduction		7
2.2. Cantilever Bridge.....		7
2.3. Box Girder		8
2.3.1 Advantages of using box girder.....		10
2.3.2 Disadvantages of using box girder		11
2.4. Upper Structure		11
2.4.1 Main Girders.....		11
2.4.2 Transverse or Diaphragm Girders		11
2.4.3 Bridge Deck.....		13
2.4.4 Bridge Bearing.....		13
2.4.5 Approach Slab		13
2.5. Bridge Loading		13

2.5.1	Static Load	14
2.5.2	Bridge Load Itself	14
2.5.3	Additional dead load.....	15
2.5.4	Traffic Load.....	16
2.5.5	Load “D”	16
2.5.6	Truck Load “T”	20
2.5.7	Brake Force.....	21
2.5.8	Passenger Loading.....	21
2.5.9	Wind Load	22
2.5.10	Earthquake Load.....	23
2.5.11	Lateral/Dynamic Land Pressure	26
2.5.12	Influence of Plan Age	26
2.6.	Tendon.....	27
CHAPTER III DESIGN AND METHODOLOGY		31
3.1.	Introduction	31
3.2.	Preliminary Design	31
3.2.1	Limit State Method.....	33
3.2.2	Working Stress Method.....	33
3.3.	Box Girder Dimension	34
3.4.	Section Properties	34
3.5.	Box Girder Loading.....	37
3.5.1	Self Weight Construction	38
3.5.2	Superimposed Dead Load.....	39
3.5.3	Line Load “D”	40
3.5.4	Brake Force	42
3.5.5	Wind Load	44
3.5.6	Earthquake Load.....	46
3.5.7	Resume moment and shear force on a box girder	48
3.6.	Prestress forces, Exentricity, and Number of Tendon.....	49
3.6.1	Initial Conditions when transfer	49
3.6.2	Final Conditions after transfer.....	51
3.7.	Tendon position	52
3.8.	Loss of Prestress	55
3.8.1	Anchorage Friction.....	55
3.8.2	Jack Friction	55
3.8.3	Anchoring	56
3.8.4	Loss of prestress due to relaxation tendon.....	57
3.9.	Stress that occurs due to prestress force	63
3.9.1	Initial condition when transfer.....	63

3.9.2	Final condition after stress transfer	64
3.10.	Stress on the box girder due to load	65
3.10.1	Stress due to Self Weight.....	65
3.10.2	Stress due to Superimposed Dead Load	66
3.10.3	Stress due to Shrinkage and Creep	66
3.10.3.1	Shrinkage	66
3.10.3.2	Creep.....	68
3.10.4	Stress due to Prestress	69
3.10.5	Stress due to Line Load	70
3.10.6	Stress due to Brake Force	71
3.10.7	Stress due to Wind Load.....	71
3.10.8	Stress due to Earthquake Load	71
3.10.9	Stress due to Effect of Temperature	72
3.11.	Stress control to load combination	73
3.11.1	Stress control to combination 1	73
3.11.2	Stress control to combination 2	73
3.11.3	Stress control to combination 3	73
3.11.4	Stress control to combination 4	73
3.11.5	Stress control to combination 5	73
3.12.	Box Girder Deflection	73
3.12.1	Deflection in the initial transfer.....	73
3.12.2	Deflection after loss of prestress	75
3.12.3	Box Girder Deflection due to Load	76
3.12.3.1	Deflection due to Self Weight	76
3.12.3.2	Deflection due to Superimposed.....	76
3.12.3.3	Deflection due to Prestress	77
3.12.3.4	Deflection due to Creep and Shrinkage	77
3.12.3.5	Deflection due to Line Load	78
3.12.3.6	Deflection due to Brake Force	78
3.12.3.7	Deflection due to Temperature	78
3.12.3.8	Deflection due to Wind Load	78
3.12.3.9	Deflection due to Earthquake Load	79
3.13.	Deflection Control to Load Combination	79
3.14.	Ultimate Review of Box Girder Prestress	79
3.15.	End Block Reinforcement	84
3.16.	Box Girder Reinforcement	86
3.17.	Review of Slab Floor Bridge	87

CHAPTER IV DESIGN AND CALCULATION.....	96
4.1. Introduction	96
4.2. Preliminary Design	96
4.2.1 Dimension of Bridge	97
4.3. Calculation.....	100
4.3.1 Load	100
4.3.1.1 Self Weight Construction	100
4.3.1.2 Superimposed dead load	101
4.3.1.3 Line Load “D”	102
4.3.1.4 Brake Force	104
4.3.1.5 Wind Load.....	106
4.3.1.6 Earthquake Load	107
4.3.1.7 Resume Moments and Shear Styles on a Beam	109
4.4. Prestress forces, Eccentricity, and Number of Tendon	111
4.4.1 Initial Condition when transfer.....	111
4.4.1 Final Condition when service	112
4.5. Tendon Position.....	113
4.5.1 Position of the Tendon in middle of the span.....	113
4.5.2 Position of the Tendon at the pedestal.....	114
4.5.3 The eccentricity of each tendon.....	115
4.5.4 Trajectory of the tendon core.....	115
4.5.5 An anchor angle.....	115
4.5.6 position and trace cable	116
4.6. Loss of Prestress	118
4.6.1 Anchorage Friction	118
4.6.2 Jack Friction	119
4.6.3 Elastic shorthening	119
4.6.4 Anchoring	121
4.6.5 Loss of prestress due to relaxtion of tendon	122
4.6.5.1 Shrinkage	122
4.6.5.2 Creep.....	123
4.7. Stress that occurs due to Prestress Force	125
4.7.1 Initial Condition when transfer	126
4.7.2 Stress after loss of prestress	126
4.8. Stress on the box girder due to load	127
4.8.1 Stress due to self weight	127
4.8.2 Stress due to superimposed dead load	127
4.8.3 Stress due to Shrinkage and Creep	128
4.8.3.1 Shringkage	128
4.8.3.2 Creep.....	129

4.8.4	Stress due to Prestress.....	130
4.8.5	Stress due to Line Load	130
4.8.6	Stress due to Brake Force	131
4.8.7	Stress due to Wind Load.....	131
4.8.8	Stress due to Earthquake Load	132
4.8.9	Stress due to Effect Temperature.....	132
4.8.10	Stress Control to Load Combination	133
4.9.	Box Girder Deflection	135
4.9.1	Deflection in the initial transfer	135
4.9.2	Deflection after loss of prestress.....	135
4.9.3	Box Girder Deflection due to Load	136
4.9.3.1	Deflection due to save weight.....	136
4.9.3.2	Deflection due to sumperimposed dead load.....	136
4.9.3.3	Deflection due to prestress.....	136
4.9.3.4	Deflection due to Creep and Shrinkage	136
4.9.3.5	Deflection due to line load.....	137
4.9.3.6	Deflection due to brake force	137
4.9.3.7	Deflection due to temperature	137
4.9.3.8	Deflection due to wind load.....	138
4.9.3.9	Deflection due to earthquake load	138
4.9.4	Deflection Control to Load Combination	138
4.10.	Ultimate Review of Box Girder Prestress.....	139
4.10.1	Capacity ultimate moment.....	139
4.10.2	The Ultimate Moment due to Load	141
4.10.2.1	Moment due to creep and shrinkage.....	141
4.10.2.2	Moment due to influence of temperature.....	142
4.10.2.3	Moment due to prestress	142
4.10.3	Control combination of moments ultimate.....	143
4.11.	End Block Reinforcement	144
4.11.1	Calculation of stirrups for bursting force	146
4.11.2	Number of stirrups used for bursting force	147
4.11.3	Overview of shear force	147
4.12.	Box Girder Reinforcement	149
4.12.1	Center wall plate	149
4.12.2	Edge wall plate	149
4.12.3	Bottom wall plate	150
4.12.4	Upper wall plate.....	150
4.13.	Review of Slab Floor Bridge	151
4.13.1.	Self Weight	151
4.13.2.	Superimposed Dead Load.....	151

4.13.3. Wind Load	151
4.13.4. Effect of Temperature	152
4.13.5. Ultimate Moment on the slab bridge floor	152
4.13.6. Slab Enlargement.....	151
4.13.7. Slab Deflection Control	154
CHAPTER V CONCLUSIONS AND RECOMMENDATIONS	157
5.1. Conclusions.....	157
5.2. Recommendations	157
REVERENCES	xxxviii
APPENDICES	xl

LIST OF TABLE

Table Number	Description	Page
Table 2.1	Factor of own heavy load	14
Table 2.2	Load factor for additional dead load.....	14
Table 2.3	Load factor due to “D” line load.....	16
Table 2.4	The number of median assumptions	18
Table 2.5	Load factor due to loading of “T” truck	19
Table 2.6	Load factor due to brake force.....	20
Table 2.7	Load factor for pedestrians	20
Table 2.8	Coefficient drag C_w	21
Table 2.9	Wind speed plan V_w	22
Table 2.10	Load factor for wind load	22
Table 2.11	Load factor for earthquake load.....	23
Table 2.12	Interest Factors.....	24
Table 2.13	Building Type Factor	24
Table 2.14	Basic Shear Coefficient	24
Table 2.15	Effect of plan age on ultimate load factor	25
Table 2.16	Young elastic modulus and long coefficient.....	25
Table 3.1	Drag Coefficient	42
Table 3.2	Wind speed plan	42
Table 3.3	Formula for calculated of maximum moment and shear force....	45
Table 3.4	Seven wire strands	46
Table 4.1	Specification of Concrete	92
Table 4.2	The Preliminary Design Box Girder Segment 1	93
Table 4.3	Type of self construction weight	94
Table 4.4	Superimposed Dead Load Type.....	103
Table 4.5	Distributed Load	104
Table 4.6	Number of Strands	105
Table 4.7	Eccentricity of each tendon	107
Table 4.8	Trajectory of the tendon core.....	110
Table 4.9	An anchorage angle	110
Table 4.10	Position and Trace Cable	111
Table 4.11	Residual creep.....	111
Table 4.12	Stress on the concrete due to creep and shrinkage	124
Table 4.13	Initial prestress force.....	124
Table 4.14	Stress control to load combination	127
Table 4.15	Stress control to combination 1	128
Table 4.16	Stress control to combination 2	129

Table 4.17	Stress control to combination 3	132
Table 4.18	Stress control to combination 4	137
Table 4.19	Deflection control to combination 1	138
Table 4.20	Deflection control to combination 2	138
Table 4.21	Deflection control to combination 3	138
Table 4.22	Deflection control to combination 4	140
Table 4.23	Deflection control to combination 5	141
Table 4.24	Ultimate Moment.....	141
Table 4.25	Moment ultimate control to combination 1	141
Table 4.26	Moment ultimate control to combination 2	142
Table 4.27	Moment ultimate control to combination 3	142
Table 4.28	Moment ultimate control to combination 4	142
Table 4.29	Moment ultimate control to combination 5	145
Table 4.30	End block reinforcement.....	146

LIST OF FIGURE

Figure Number	Description	Page
Figure 1.1	Beam Bridge	1
Figure 1.2	Arch Bridge	2
Figure 1.3	Suspension Bridge	3
Figure 1.4	Cantilever Box Girder Bridge.....	5
Figure 2.1a	Ilustrasion of Cantilever Spans bridge.....	7
Figure 2.1b	Cantilever with spans Type Cantilever Bridge.....	7
Figure 2.2	Erection Segment of Box Girder	8
Figure 2.3	Girder Components.....	11
Figure 2.4	Supporting Bridge Girders.....	11
Figure 2.5	The “D” Load Distribution Works on the Bridge.....	16
Figure 2.6	Terms Use of Expenses “D”	17
Figure 2.7	The “T” Load Provisions are Worked on the Highway.....	19
Figure 2.8	Typical Post Tensioning Anchorage Hardware for Tendons	26
Figure 2.9	Typical Post Tensioning Bar System Hardware (Dwydag).....	26
Figure 2.10	Typical Post Tensioning Bar System Hardware (Williams)	27
Figure 2.11	Typical Balanced Cantilever.....	28
Figure 3.1	Flowchart of Design and Methodology	30
Figure 3.2	Box Girder	29

Figure 4.15	Static Cross-section of the upper-beam	139
Figure 4.16	Static Cross Section of the under-beam.....	140

LIST OF APPENDICES

Appendic Number	Description	Page
Appendic AI	Calculation Section Properties of Box Girder Segment 2.....	152
Appendic A2	Calculation Section Properties of Box Girder Segment 3.....	153
Appendic A3	Calculation Section Properties of Box Girder Segment 4.....	154
Appendic A4	Calculation Section Properties of Box Girder Segment 5.....	155
Appendic B	Calculation of Weight of Box Girder	156
Appendic C	Superimposed Dead Load Type of Box Girder	157
Appendic D	Line Load, Wind Load	158
Appendic E	Brake Force, Earthquake Load.....	159
Appendic F1	Number of Strands of Box Girder I.....	160
Appendic F2	Number of Strands of Box Girder I.....	161
Appendic G1	Trajectory of tendon core of Box Girder 1	162
Appendic G2	Trajectory of tendon core of Box Girder 1	163
Appendic H1	Position and Trace Cable of Box Girder Segment 1	164
Appendic H2	Position and Trace Cable of Box Girder Segment 2	165
Appendic H3	Position and Trace Cable of Box Girder Segment 3	166
Appendic H4	Position and Trace Cable of Box Girder Segment 4	167
Appendic H4	Position and Trace Cable of Box Girder Segment 5	168
Appendic I	Residual Creep of Box Girder.....	169
Appendic J	Stress on the Concrete Due to Creep and Shrinkage	170
Appendic K	Initial Pre Stress Force of Box Girder I, II, III, IV, V	171
Appendic K	Stress Control to Load Combination	171
Appendic L1	Stress of Box Girder 1.....	172
Appendic L2	Stress of Box Girder 1.....	173
Appendic L3	Stress of Box Girder 2.....	174
Appendic L4	Stress of Box Girder 2.....	174
Appendic L5	Stress of Box Girder 3.....	175
Appendic L6	Stress of Box Girder 3.....	176

Appendic L7 Stress of Box Girder 4.....	177
Appendic L8 Stress of Box Girder 4.....	178
Appendic L9 Stress of Box Girder 5.....	179
Appendic L10 Stress of Box Girder 5.....	180
Appendic M1 Box Girder I, II, III, IV, V	181
Appendic M1 Box Girder I, II, III, IV, V	182
Appendic N1 Ultimate Moment Box Girder Segment I & II	183
Appendic N2 Ultimate Moment Box Girder Segment III & IV	184
Appendic N3 Ultimate Moment Box Girder Segment V.....	185
Appendic O1 Moment Ultimate Control to Load Combination B.G 1.....	186
Appendic O2 Moment Ultimate Control to Load Combination B.G 1.....	187
Appendic O3 Moment Ultimate Control to Load Combination B.G 2.....	188
Appendic O4 Moment Ultimate Control to Load Combination B.G 2.....	189
Appendic O5 Moment Ultimate Control to Load Combination B.G 3.....	190
Appendic O6 Moment Ultimate Control to Load Combination B.G 3.....	191
Appendic O7 Moment Ultimate Control to Load Combination B.G 4.....	192
Appendic O8 Moment Ultimate Control to Load Combination B.G 4.....	193
Appendic O9 Moment Ultimate Control to Load Combination B.G 5.....	194
Appendic O10 Moment Ultimate Control to Load Combination B.G 5.....	195
Appendic P End Block Reinforcement of B.G. I, II, III, IV, V	196
Appendic Q End Block Reinforcement of B.G. I, II, III, IV, V	197
Appendic R End Block Reinforcement of B.G. I, II, III, IV, V.....	198
Appendic S Distance of Stirrup D16	199
