

## **ABSTRAK**

Ujian OSCE merupakan ujian yang dilakukan difakultas ilmu keperawatan di unissula. Ujian OSCE adalah suatu ujian dilakukan di masing-masing ruangan penilaian, mahasiswanya dinilai kemampuan kliniknya secara bergantian oleh penilai yang sudah disiapkan sebelumnya, dengan menggunakan skema penilaian yang objektif. Ujian dilakukan secara objektif karena semua mahasiswa diuji dengan ujian yang sama, namun dengan menggunakan lembar penilaian yang berbeda di masing-masing ruangan yang berguna untuk mempersiapkan skill mahasiswa. Pada penerapan ujian OSCE ini sesuai dengan kebutuhan observer sehingga penerapannya mampu mempermudah tugas dari observer dan efisiensi dalam pengeluaran kertas.

Kata Kunci : Ujian OSCE, LCG, RNG , Alur kerja ujian OSCE.

## **ABSTRACT**

*OSCE exam is an exam conducted in nursing in faculty unissula. The OSCE is as assessment room, student his ability alternately by assessors who have been prepared previously, using an objective assessment of the scheme. Objective because all students are tested with the same test but with the use of certain assessment sheet. The OSCE can also be used to prepare for the nursing student's skill. During the exam participants traveled through some space in a sequence. In each room there is a task or a problem to be done/demonstrated. On the old system, the observer doing assessment of students with the use of paper. By using e-osce, later given the ease at the observer. Then on the distribution problem, randomization is performed by using the LCG algorithm because to get a different question and get the desired competency by conducting randomization reserved.*
