

LAMPIRAN

LAMPIRAN I

1. Cara pembuatan Isoflavon

a. Fraksinasi Isoflavon dari Biji Kedelai

1) Biji kedelai lokal varietas Grobogan, JawaTengah. Biji kedelai 100g diekstrasi dengan 500 ml aseton 70% secara maserasi kinetika menggunakan *rotary shaker* dengan putaran 180 rpm selama 4 jam. Ekstrasi diulang dua kali dan dirotavapor hingga diperoleh ekstrak kering.

2) Fraksinasi isoflavon

Ditambahkan sebanyak 1 gr ekstrak dengan 100 ml aquades, fraksinasi dilakukan berdasarkan tingkat kepolarannya. Frakasinasi diawali dengan pelarut non polar (n-heksan) sebanyak 100ml, sehingga diperoleh fraksi n-heksan dan air. Fraksinasi selanjutnya dengan pelarut semi polar (etil asetat) sebanyak 100ml, sehingga diperoleh fraksi etil asetat dan air. Fraksinasi terakhir dengan polar (n-butanol) sebanyak 100ml, sehingga diperoleh fraksinasi n-bitanol dan air. Fraksi n-heksan, fraksi etil asetat dan fraksi n-butanol diuapkan dengan rotary epavator sampai kering pada suhu 40-50°C

2. Cara Pengukuran Kadar Estradiol, FSH dan LH

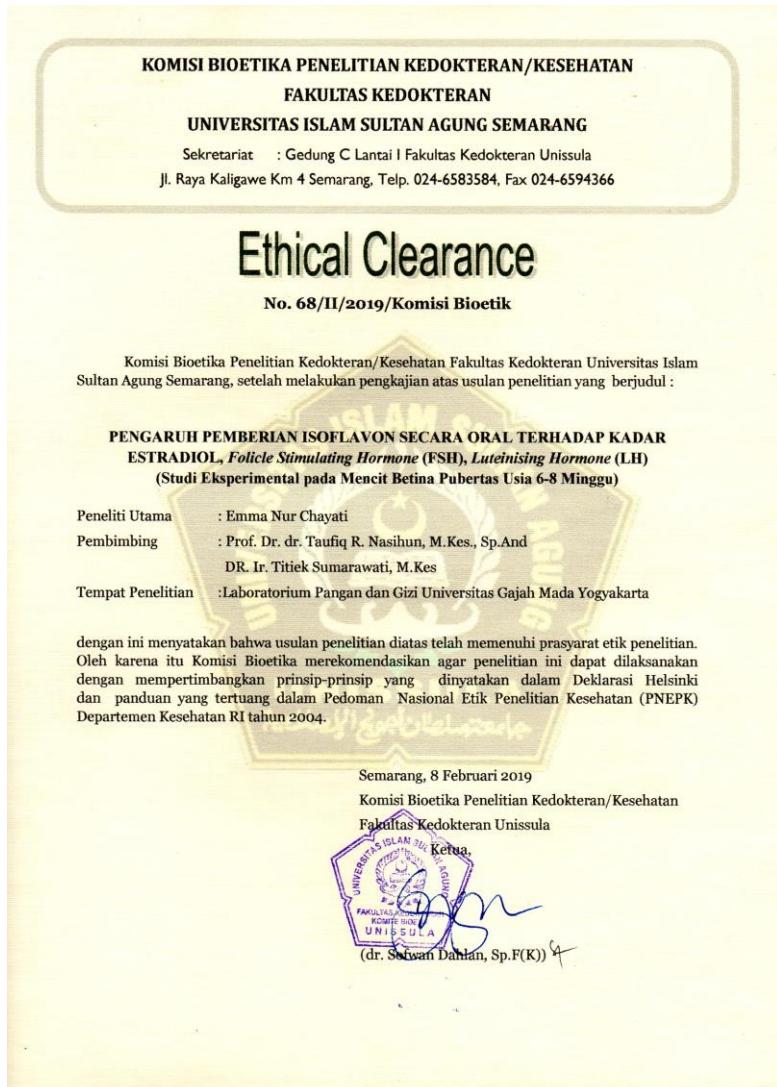

Pemeriksaan kadar estradiol, LH dan FSH dilakukan di laboratorium dengan metode ELISA menggunakan alat spektrofotometer dengan panjang gelombang 450 nm. Sampel darah mencit diambil pada masing-masing kelompok penelitian dilakukan pemeriksaan kadar estradiol, LH dan FSH. Darah mencit diambil sebanyak 0,5 cc dari medial kantus sinusorbitalis mata kanan, sebelum pengambilan darah dilakukan tindakan asepsis dan antiseptik dengan pengusapan alkohol sekitar daerah yang akan diambil darahnya. Darah yang diambil kemudian dimasukkan ke dalam tabung *ependorf*, diendapkan selama 2 jam pada temperatur kamar, kemudian di *sentrifuge* selama 15 menit kecepatan 4000 rpm, kemudian serum diambil dan dimasukkan ke dalam *ependorf* dan dilakukan pemeriksaan dengan metode ELISA dengan panjang gelombang spektrofotometer 450 nm. Langkah dalam pemeriksaan kadar estradiol, LH dan FSH menggunakan ELISA sebagai berikut :

- a. Reagen diletakkan di suhu ruang 30 menit sebelum digunakan.
- b. Dilakukan pengambilan 50 μL , standar, sampel, dan *quality control* dengan menggunakan pipet, kemudian dimasukkan ke dalam *well*.
- c. Ditambah 200 μL , enzim konjugat kemudian dilakukan pengocokan, setelah itu diinkubasi pada suhu ruang (37°C) selama 120 menit, tanpa menutup *plate*.

- d. Caian dibuang dan dicuci sebanyak 3x dengan larutan *wash buffer* sebanyak 400 μL ditambahkan lagi 100 μL *substrat solution*, diinkubasi kembali pada suhu ruang selama 15 menit, kemudian ditambahkan kembali 50 μL *stopping solution*.
- e. Pembacaan dilakukan pada spektrofotometer pada panjang gelombang 450 nm, maksimum dilakukan dalam 10 menit.
- f. Hasil kadar Estradiol, LH dan FSH dalam satuan pg/mL.

FORMULIR PEMAKAIAN FASILITAS LABORATORIUM GIZI (HEWAN COBA)

Nama Mahasiswa/Peneliti

: Euna Nur Chayati

No. Mahasiswa

: MBK. 16.8.01.0059

Jurusan/Fakultas/Universitas

: Magister Biomedik /Fakultas Kedokteran /

Alamat Rumah dan No. Telp/HP

: Universitas Islam Sultan Agung Semarang

: Jl. Ki Ageng Solo, Krajan, Tawangharjo, Grobogan.

Topik Penelitian/Judul

: Pengaruh Pemberian koflavor pada kadar Estradiol, FSH dan LH pada Mencit Betina Rabtaek (Usia 6-8 bulan)

Mulai bekerja pada tanggal

: Senin, 25 Februari 2019

Rencana penyelesaian tanggal

: 26 Maret 2019

Diperpanjang sampai tanggal

:

Bekerja di laboratorium

: 1. Gizi

Yogyakarta, 19 Februari 2019

Mahasiswa /Peneliti
