PENGARUH PROMOSI KESEHATAN DENGAN METODE *FOCUS GROUP DISCUSSION* TERHADAP PENGETAHUAN MASYARAKAT TENTANG DIABETES MELITUS DI PUSKESMAS BANGETAYU SEMARANG

47 halaman + 8 tabel + 3 gambar + 20 lampiran + xvii

Latar Belakang: Diabetes Melitus merupakan hilangnya toleransi karbohidrat dan hiperglikemia yang menimbulkan penurunan berat badan penggunaan FGD untuk meningkatkan pengetahuan penelitian ini bertujuan untuk mengetahui pengaruh terhadap pengetahuan tentang diabetes melitus di Puskesmas Bangetayu Semarang.

Metode: jenis penelitian *eksperimen semu (quasi experimental) with control group design* dengan *pre - test – post – test*. teknik *consecutive sampling, consecutive sampling* (berurutan), total sempel ada 55 responden, sempel 2 yaitu sebanyak 28 untuk kelompok perlakuan dan sebanyak 27 untuk kelompok kontrol.

Hasil: analisis univariat umur kelompok perlakuan termasuk pra lanisa kelompok kontrol termasuk lansia awal, pendidikan responden SD, pekerjaan responden ibu rumah tangga, pengetahuan sebelum diberikan kelompok perlakuan kategori sedang 23 responden, sesudah di berikan kategori tinggi dengan 27 dan kelompok kontrol sebelum diberikan promosi kesehatan kategori sedang 23 dan sesudah kategori tinggi jumlah 15. Hasil analisis bivariat chi square nya kelompok perlakuan 11,571 nilai $p - value$ 0,001 pada saat pre test pada saat post test $p - value$ 0,000 dan chi square 13,370, kelompok kontrol chi square nya 24,143 $p - value$ 0,000 pre test saat post test $p - value$ 0,564 chi square 0,333.

Simpulan: Ada pengaruh adanya promosi kesehatan dengan diberikan metode FGD kelompok perlakuan dan kontrol hal ini ditunjukan karena $p - value < 0,1$.

Kata Kunci : Metode *Focus Group Discussion*, pengetahuan Diabetes Melitus Promosi kesehatan

ABSTRACT

Satrio Kusnanda Murdiqi

THE EFFECT OF HEALTH PROMOTION USING FOCUS METHOD FOR DISCUSSION OF DIABET COMMUNITY CONCERNING MELITUS IN BANGETAYU SEMARANG PUSKESMAS

47 pages + 8 tables + 3 pictures + 20 attachments + xvii

Background: Diabetes mellitus is a loss of carbohydrate tolerance and hyperglycemia that causes weight loss using FGD to increase knowledge. This study aims to determine the effect on knowledge about diabetes mellitus at the Bangetayu Public Health Center in Semarang.

Method: quast experimental research with control group design with pre-test-post-test. consecutive sampling techniques, consecutive sampling (sequential), a total sample of 55 respondents, sample 2, as many as 28 for the treatment group and as many as 27 for the control group.

Results: univariate analysis of the age of the treatment group including pre-service control groups including the elderly, education of elementary respondents, occupation of housewife respondents, knowledge before being given the treatment category of medium 23 respondents, after being given a high category with 27 and control group before being given health promotion medium category 23 and after high category number 15. The results of the bivariate analysis of the chi square treatment group 11.571 p-value 0.001 at the time of the pre-test at the post-test p-value 0,000 and chi square 13,370, the chi square control group 24,143 p-value 0,000 pre-test when post-test p-value 0,564 chi square 0,333.

Conclusion: There is an effect of health promotion by given the FGD method of the treatment and control group, this is indicated because the p-value <0.1.

Keywords : Focus Group Discussion method, Diabetes knowledge mellitus health Promotion
