

## **LAMPIRAN-LAMPIRAN**

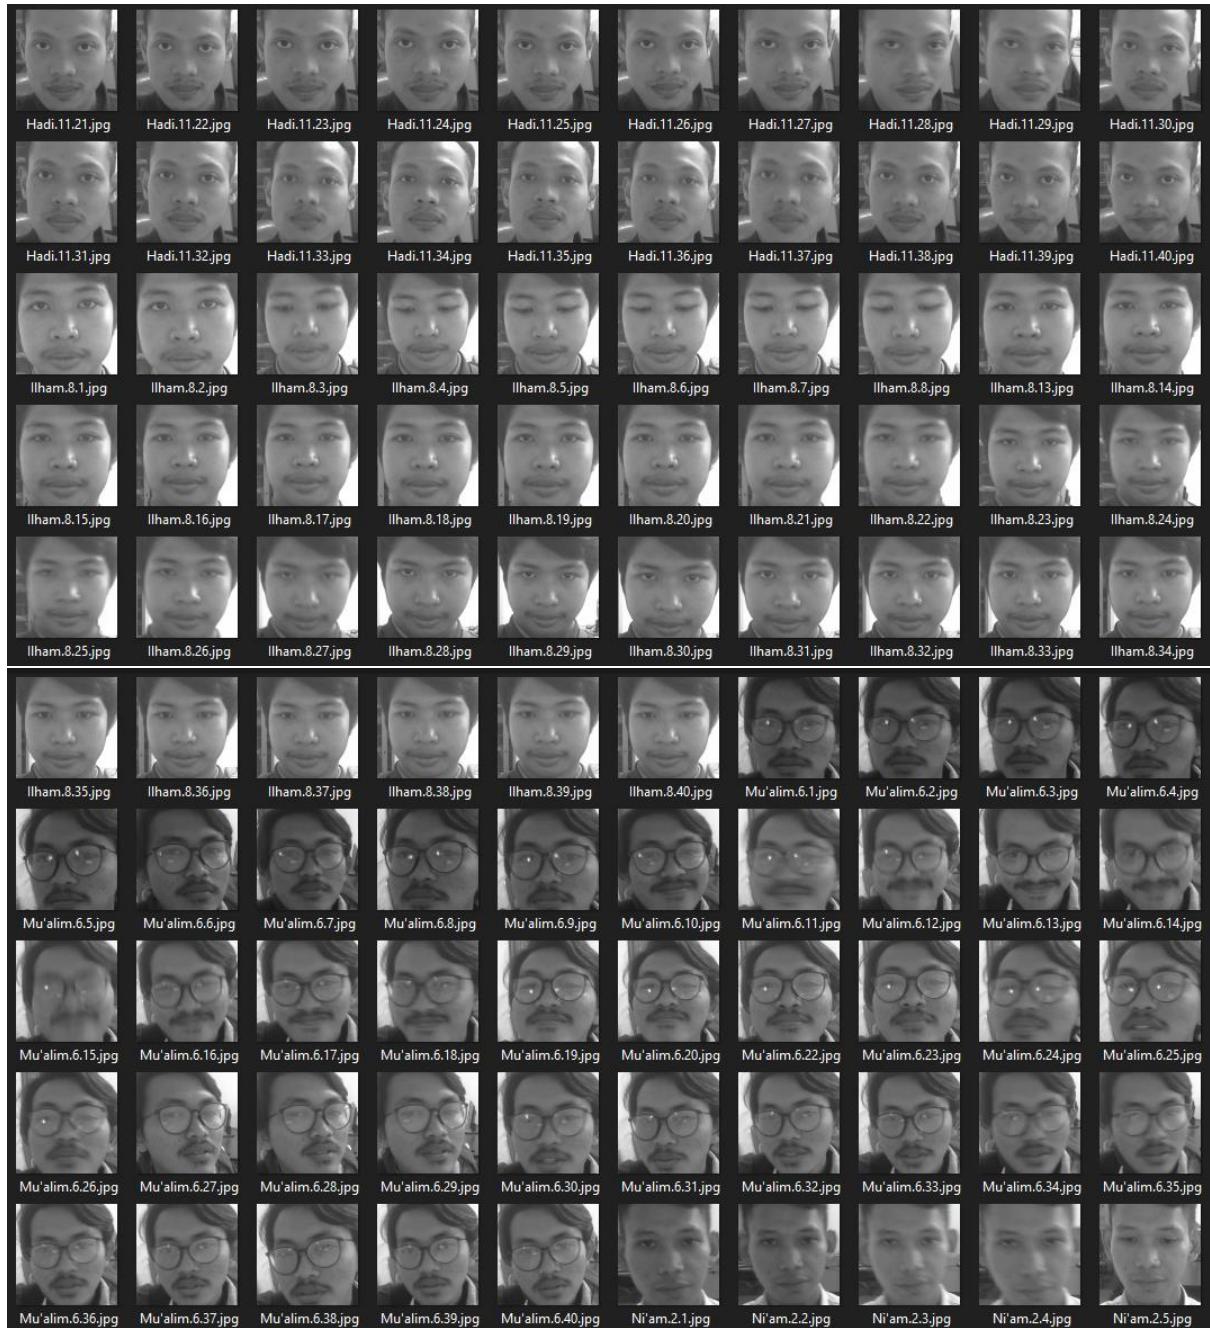

Lampiran 1 : Gambar Data *Training*

Lampiran 2 : Konfigurasi Library Opencv

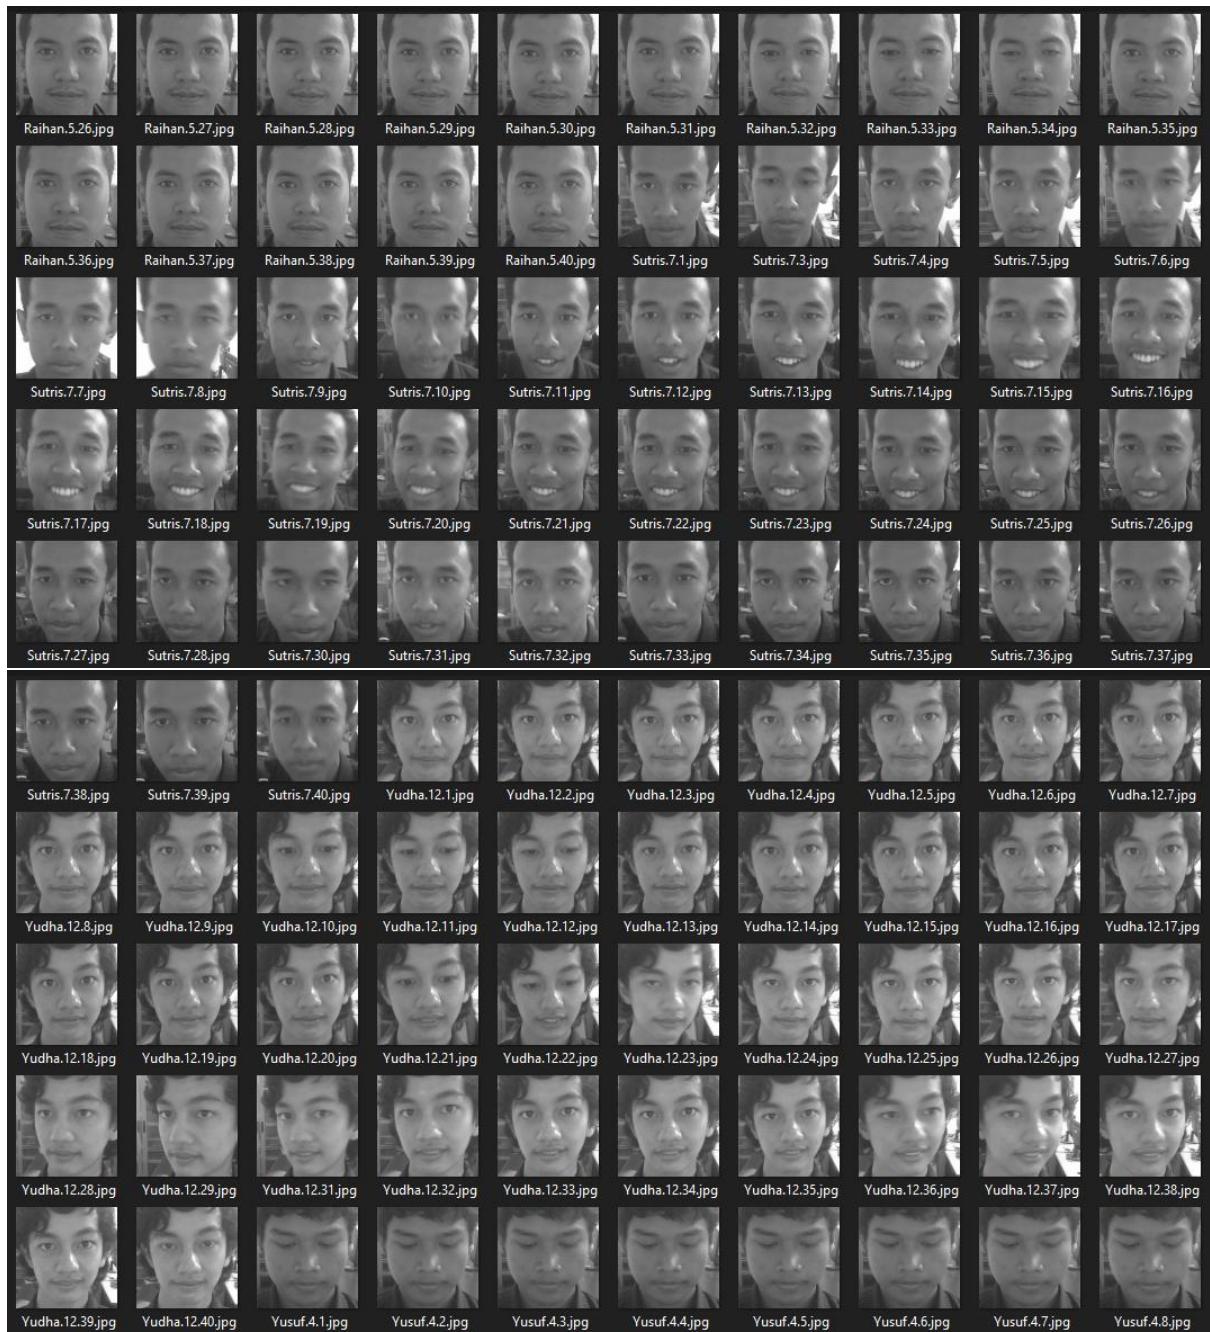

## LAMPIRAN 1

### GAMBAR DATA TRAINING

## **LAMPIRAN 2**

### **KONFIGURASI *LIBRARY OPENCV***

#### **1. Instal opencv**

Tekan Ctrl+Alt+t untuk membuka terminal kemudian masukkan perintah berikut untuk menghapus wolfram-engine dan libreoffice\* karena tidak akan kita gunakan sehingga akan menghemat penyimpanan.

```
sudo apt-get purge wolfram-engine
sudo apt-get purge libreoffice*
sudo apt-get clean
sudo apt-get autoremove
```

#### **2. update dan upgrade**

```
sudo apt-get update && sudo apt-get upgrade
sudo apt-get install build-essential cmake unzip pkg-config
sudo apt-get install libjpeg-dev libpng-dev libtiff-dev
sudo apt-get install libavcodec-dev libavformat-dev
libswscale-dev libv4l-dev
sudo apt-get install libxvidcore-dev libx264-dev
sudo apt-get install libgtk-3-dev
sudo apt-get install libcanberra-gtk*
sudo apt-get install libatlas-base-dev gfortran
```

#### **3. Install Python 3**

```
sudo apt-get install python3-dev
```

#### **4. Downolad OpenCV 4.2**

```
wget -O opencv.zip
https://github.com/opencv/opencv/archive/4.2.0.zip
```

```
wget -O opencv_contrib.zip  
https://github.com/opencv/opencv_contrib/archive/4.2.0.  
zip  
  
unzip opencv.zip  
unzip opencv_contrib.zip  
  
mv opencv-4.2.0 opencv  
mv opencv_contrib-4.2.0 opencv_contrib
```

## 5. Download Bootstrap.py

```
wget https://bootstrap.pypa.io/get-pip.py
```

## 6. Install pip3

```
sudo python3 get-pip.py  
Install virtualenv  
sudo pip install virtualenv virtualenvwrapper
```

## 7. Hapus ~/get-pip.py ~/.cache/pip

```
sudo rm -rf ~/get-pip.py ~/.cache/pip  
Buka source ~/.profile untuk persiapan virtual  
environment  
nano ~/.profile
```

## 8.Tambahkan kode program berikut pada baris paling bawah

```
# virtualenv and virtualenvwrapper  
export WORKON_HOME=$HOME/.virtualenvs  
export VIRTUALENVWRAPPER_PYTHON=/usr/bin/python3  
source /usr/local/bin/virtualenvwrapper.sh
```

## 9. Jalankan ~/.profile

```
source ~/.profile
```

10. Membuat virtual environment dengan nema “cv”

```
mkvirtualenv cv -p python3
```

11. Jalankan virtual environment dengan perintah berikut

```
workon cv
```

12. Install library numpy di dalam virtual environment “cv”

```
pip install numpy
```

13. Masuk folder opencv

```
cd ~/opencv
```

14. Buat folder build dan masuk folder build

```
mkdir build  
cd build
```

15. Install CMAKE

```
cmake -D CMAKE_BUILD_TYPE=RELEASE \  
-D CMAKE_INSTALL_PREFIX=/usr/local \  
-D OPENCV_EXTRA_MODULES_PATH=~/opencv_contrib/modules \  
-D ENABLE_NEON=ON \  
-D ENABLE_VFPV3=ON \  
-D BUILD_TESTS=OFF \  
-D OPENCV_ENABLE_NONFREE=ON \  
-D INSTALL_PYTHON_EXAMPLES=OFF \  
-D BUILD_EXAMPLES=OFF ..
```

16. Swap SD Card dengan nilai maksimal (2048)

```
sudo nano /etc/dphys-swapfile  
sudo /etc/init.d/dphys-swapfile stop  
sudo /etc/init.d/dphys-swapfile start
```

17. Membuat cmake -j4 (membutuhkan waktu 1 jam 15 menit untuk raspi 4 ram 4 gb)

```
make -j4
sudo make install
sudo ldconfig

cd ~/.virtualenvs/cv/lib/python3.7/site-packages/
ln -s /usr/local/lib/python3.7/site-
packages/cv2/python-3.7/cv2.cpython-37m-arm-linux-
gnueabihf.so cv2.so

sudo nano /etc/dphys-swapfile
sudo /etc/init.d/dphys-swapfile stop
sudo /etc/init.d/dphys-swapfile start
```
