### GAMBARAN PENGETAHUAN IBU HAMIL TENTANG KUNJUNGAN *ANTENATAL CARE* DI KLINIK HAMZAH KABUPATEN DEMAK

56 hal + 4 tabel + 12 lampiran + xvii

Angka Kematian Ibu (AKI) di tahun 2014 mengalami peningkatan yaitu 126,55% dibandingkan dengan tahun 2013 yaitu sebanyak 118,62%. Tingginya angka tersebut dipengaruhi oleh rendahnya pengetahuan tentang pentingnya melakukan kunjungan *Antenatal Care* selama kehamilan. Survey pendahuluan di Klinik Hamzah Kabupaten Demak yang dilakukan 10 ibu hamil, dari hasil survey 8 ibu hamil belum mengetahui tentang kunjungan *Antenatal Care*.

Tujuan penelitian ini adalah mengetahui gambaran pengetahuan ibu hamil tentang kunjungan *Antenatal Care* di Klinik Hamzah Kabupaten Demak.

Jenis penelitian deskriptif menggunakan pendekatan *cross sectional*. Jumlah sampel sebanyak 34 responden dengan pengambilan sampel menggunakan *Non Probability Sampling* yaitu dengan *Aksidental*. Instrumen penelitian yang digunakan adalah kuesioner dan analisis data menggunakan analisis univariat.

Hasil penelitian menunjukkan bahwa mayoritas responden memiliki pengetahuan kurang sebanyak 31 responden (91,2%).

Simpulan masih kurangnya pengetahuan ibu hamil tentang kunjungan *Antenatal Care*. Sebaiknya bidan mampu meningkatkan kegiatan penyuluhan baik melalui Dasa Wisma dan PKK, kader diharapkan dapat memberikan dukungan serta motivasi kepada ibu hamil agar lebih disiplin memeriksakan kehamilan serta ibu hamil dapat meningkatkan pengetahuan tentang kunjungan *Antenatal Care* dengan mencari informasi baik bertanya kepada tenaga kesehatan, bidan, teman maupun media massa.

Kata kunci : Pengetahuan, ibu hamil, kunjungan *Antenatal Care*

### PICTURE OF PREGNANT WOMEN KNOWLEDGE ABOUT ANTENATAL CARE VISITS IN CLINIC HAMZAH DISTRICT DEMAK

56 pages + 4 tables + 12 appendices+ xvii

The maternal mortality rate in the year 2014 has risen 126,55% compared to the year 2013 as many as 118,62%. The high numbers are affected by lack of knowledge about the importance of *Antenatal Care* visits during pregnancy. Preliminary survey in Clinic Hamzah District Demak perfomed 10 pregnant women, of survey 8 pregnant women do not know about *Antenatal Care* visits.

The purpose of this study is to describe the knowledge of pregnant women on antenatal care visits in Clinic Hamzah District Demak.

Descriptive research using *cross sectional* approach. The total sample 34 respondents using *Non Probability Sampling* with *accidental* sampling. The resears instrument was a questionnaire and analyzed using univariate analysis.

The results showed that the majority of respondents have knowledge of as many as 31 respondents (91,2%).

The conclusion is still a lack of knowledge of pregnant women on *Antenatal Care* visits. Midwives should be able to increase outreach activities through Dasa Wisma and PKK, as well as pregnant women can increase the knowledge of *Antenatal Care* visits with finding good information asked health workers, midwives, friends, and mass media.

Keywords : Knowledge, ppregnant women, *Antenatal Care* visits.
