ABSTRAK

Penelitian ini berujuan untuk mengetahui hubungan antara konformitas dan kematangan emosi terhadap *cyberbullying* pada remaja SMP X di Kota Pekalongan. Penelitian ini menggunakan metode kuantitatif. Partisipan dalam penelitian ini berjumlah 113 siswa SMP X di Kota Pekalongan. Metode pengumpulan data dalam penelitian ini menggunakan tiga skala, yaitu skala *cyberbullying* berjumlah 29 aitem dengan koefisien reliabilitas 0,885, skala konformitas berjumlah 20 aitem dengan koefisien reliabilitas 0,774 dan skala kematangan emosi berjumlah 24 aitem dengan koefisien reliabilitas 0,840. Teknik analisis data menggunakan analisis regresi dua prediktor menunjukkan bahwa ada hubungan yang sangat signifikan antara konformitas dan kematangan emosi terhadap *cyberbullying* pada remaja SMP X di Kota Pekalongan. Hasil tersebut menunjukkan bahwa hipotesis pertama dalam penelitian ini diterima. Hal ini dibuktikan dengan hasil korelasi $R_{y(1,2)} 0,731$, F_{hitung} sebesar 63,085 dengan taraf signifikansi sebesar 0,000 ($p < 0,01$). Teknik analisis parsial digunakan untuk menguji hipotesis kedua dan ketiga. Hasil uji hipotesis kedua diperoleh korelasi $r_{y_{x1-x2}} = 0,369$ dengan taraf signifikansi $p = 0,000$ (pada $p < 0,01$). Hasil tersebut menunjukkan hipotesis kedua diterima yang berarti bahwa ada hubungan positif yang sangat signifikan antara konformitas dengan *cyberbullying* pada remaja SMP X di Kota Pekalongan. Hasil uji hipotesis ketiga diperoleh korelasi $r_{y_{x1-x2}} = -0,429$ dengan taraf signifikansi $p = 0,000$ (pada $p < 0,01$). Hasil tersebut menunjukkan hipotesis ketiga dalam penelitian ini diterima yang berarti bahwa ada hubungan negatif yang sangat signifikan antara kematangan emosi dengan *cyberbullying* pada remaja SMP X di Kota Pekalongan.

Kata kunci : *Cyberbullying*, Konformitas, Kematangan Emosi

**THE RELATIONSHIP BETWEEN CONFORMITY AND EMOTIONAL
MATURITY AGAINST CYBERBULLYING AMONG ADOLESCENTS OF X
JUNIOR HIGH SCHOOL IN PEKALONGAN CITY**

ABSTRACT

The goal of this research was to determine the relationship between conformity and emotional maturity against cyberbullying among adolescents of X Junior High School in Pekalongan City. This research used quantitative methods. Participants in this research were 113 students of X Junior High School in Pekalongan. The data collection methods in this research used three scales, that is the cyberbullying scale consists of 29 questions with a reliability coefficient of 0.885, conformity scale consists of 20 questions with a reliability coefficient of 0.774 and emotional maturity scale consists of 24 questions with a reliability coefficient of 0.840. Data was analyzed using regression analysis of two predictors showing that there was a very significant relationship between conformity and emotional maturity against cyberbullying among adolescents of X Junior High School in Pekalongan City. This result indicate that the first hypothesis was accepted. This was evidenced by the results of the $R_{y \text{ correlation } (1,2)}$ 0.731, F_{result} in the amount of 63.085 with a significance level of 0.000 ($p < 0.01$). Partial analysis technique is used to test the second and third hypothesis. The second hypothesis results obtained $r_{yx1-x2} = 0.369$ correlation with a significance level of $p = 0.000$ (at $p < 0.01$). The result indicate that the second hypothesis was accepted, which mean there was a very significant positive relationship between conformity with cyberbullying among adolescents of X Junior High School in Pekalongan City. The third hypothesis test results obtained $r_{yx1-x2} = - 0.429$ correlation with a significance level of $p = 0.000$ (at $p < 0.01$). This result indicate that third hypothesis in this research was accepted, which mean there was a very significant negative relationship between emotional maturity with cyberbullying among adolescents of X Junior High School in Pekalongan City.

Keywords : Cyberbullying, Conformity, Emotional Maturity
