THE CORRELATION OF FAMILY SUPPORT AND ELDERLY VISITATION IN UTILIZING CENTER FOR ELDERLY HEALTH CARE AT RW 2 OF KALIGAWE GAYAMSARI SEMARANG

39 pages + 7 tables + xvii

Background: Elderly Health care is aimed to give health service special for elderly. Family support is the main support system for them. Now a days, there are 94 elderly people at RW 2 Kaligawe, where only 13 of them attending the healthcare at the end of month. This study aims to find out the correlation of family support and elderly visitation in utilizing center for elderly healthcare.

Method: This study belongs to explanatory research with cross sectional approach. The data were collected through questionnaire, containing checklist sheet on healthcare visitation and healthcare visitation book. There were 76 elderly people selected as respondents by consecutive sampling technique using spearman test.

Result: Based on the analysis, it obtained 17,2% of high family support, while the rest, 82,9%, was low family support. 10,5% of them had high visitation intensity, while the rest, 89,5%, had low visitation intensity. The spearman test obtained p-value or significance 0,000 (p-value <0,05) and correlation coefficient value was 0,641.

Conclusion: There is correlation of family support and elderly visitation in utilizing center for elderly healthcare at RW 2 of Kaligawe Gayamsari Semarang.

Keywords: Family Support, Elderly Healthcare Visitation.
