**GAMBARAN INTERAKSI IBU DENGAN BAYI CUKUP BULAN SAAT  
PEMBERIAN ASI DI RUANG BAITUN NISA II RUMAH SAKIT ISLAM  
SULTAN AGUNG SEMARANG**

**47 hal+ 5 tabel + xiv + 16 lampiran**

**Latarbelakang:** Interaksi mempunyai berbagai manfaat baik untuk bayi maupun untuk ibu. Jika tercipta interaksi yang baik antara ibu dengan bayi terutama saat pemberian ASI dapat menumbuhkan rasa percaya diri ibu, pertumbuhan-perkembangan bayi dan kecerdasan emosional. Adapun pada bayi yang kebutuhan emosionalnya tidak terpenuhi karena kurangnya interaksi dan kelekatan bayi sehingga berpotensi mengalami masalah intelektual, emosional, moral dan sosial di kemudian hari. Tujuan penelitian ini adalah untuk mendeskripsikan interaksi ibu dengan bayi saat pemberian ASI di Ruang Baitun Nisa Rumah Sakit Islam Sultan Agung.

**Metode:** Penelitian ini merupakan jenis penelitian kuantitatif dengan desain deskriptif. Pengumpulan data dilakukan dengan perekaman video dan dinilai dengan menggunakan lembar observasi. Jumlah responden sebanyak 15 ibu post partum dan pengambilan sampel yang digunakan adalah tehnik *accidental sampling*. Data yang diperoleh diolah secara deskriptif.

**Hasil:** Hasil analisa yang diperoleh dari 15 responden terbanyak berusia 36-45 tahun sejumlah 7 responden (46,7%), pendidikan terakhir terbanyak adalah sekolah menengah pertama sejumlah 7 responden (46,7%), dan paritas terbanyak adalah primipara sejumlah 9 responden (60,0%). Adapun hasil gambaran interaksi tertinggi adalah kategori kurang sejumlah 10 responden (66,7%).

**Simpulan:** Gambaran interaksi ibu dengan bayi saat pemberian ASI terbanyak adalah kategori kurang.

**Kata kunci :**Interaksi ibu-bayi, pemberian ASI, bayi cukup bulan

**INTERACTION BETWEEN THE MOTHERS AND THEIR INFANTS AT  
BAITUN NISA WARD, SULTAN AGUNG ISLAMIC HOSPITAL,  
SEMARANG**

**47 pages + 5 tables + xiv + 16 appendixes**

**Background:** Interaction gives many benefits to both mother and the baby. If good Interaction can be built between mother and the baby especially during the breastfeeding time, it eventually will create strong self-confidence to the mother and support the development of the baby's physic as well as his emotional intelligence. For the babies whose emotional needs are not adequately fulfilled as a matter of lack of interaction with his mother, they have high risk of being exposed to intellectual, emotional, morale, and social problems when they grow up. The objectives of this research is to describe the interaction between the mothers and their babies during the breastfeeding activity in Baitun Nisa Lactation Room of Sultang Agung Islamic hospital.

**Methods:** This study used a quantitative research with descriptive design. The data collection was done with video recording and assessed using observation sheet. There were 15 post-partum mothers involved as respondent selected by accidental sampling technique. The data obtained were processed descriptively.

**Results:** After analyzing 15 responden, it was found that most of respondents aged 36-45 years with 7 respondents (46.7%), mostly they have junior high school as top in their education with 7 respondents (46.7%), the highest parity is primiparous with 9 respondents (60.0%). As for the interaction level is categorized as low with 10 respondents (66.7%).

**Conclusion:** The interactions level shown by the mothers to their babies when breastfeeding time was in low category.
